

## Important questions pertaining to Tubal Reversal

Most of you might have heard about Tubal Reversal for the first time and might be anxious to know more about it. Some of other queries that arise are how much effective it is? How much does it cost? And many other related questions.

The first question that relates to the Tubal Reversal Surgery is the age. Most of the women suffer from mental agony by thinking that their natural fertility is diminishing with their age. Of course the chances of getting pregnant reduced to a great level when you acquire age. The fertility rate in the twenties is quite high whereas in thirties it diminishes substantially, and by the age of 40, the success rate of getting pregnant further lowers. But that does not mean that above 40, you have the minimal chances of getting pregnant. You can still conceive a child, if you are having menses.

Second question that relates to the Tubal Reversal Surgery is the type of tubal ligation you had. For the successful tubal reversal, you need to have enough healthy tube remaining for the repair. Different types of tubal ligation have different impact on the cases. Women with the ligation, ring or clip method, coagulation technique have varied chances for pregnancy after the surgery. In case, you are not sure of which type of tubal ligation you have, you can go for test and obtain the reports relating to tubal ligation.

Third question that you want to resolve is which is the best option for sterilization? Is it IVF or Tubal Reversal Surgery? When women want more children and their tubes are tied down, they should go for in vitro fertilization (IVF). This is true that not every candidate is suitable for the treatment of tubal reversal treatment but there is a high rate of expectancy than IVF of getting pregnant.

Fourth question that you might ask frequently are the qualities that you must look for in a tubal reversal surgeon? For this purpose, you must check online the available lists of all the eminent surgeons trained and experienced in tubal surgery. You must also check the number of surgeries that a doctor has so far performed and the feedback from the former and existing patients. Check whether the doctor also performs Tubal reversal surgery on out-patient basis. This would curtail the cost of hospitalization.

Fifth question that is the most vital is how much a tubal reversal surgery cost.&nbsp; When you pay in full amount, you might get discounted, whereas partly paying for the tubal reversal surgery may cost you more.

Next vital question that you would like to solve is the non-availability of near tubal reversal clinic in your area. A large number of patients residing at the far-flung areas come down to get the best treatment. They may have to spend two or three nights and after getting proper treatment they get back to their respective places.

All the above questions related to tubal reversal surgery must have cleared all your doubts and now you are well informed about all the intricacies of tubal reversal.
